

Amit Kurmoli

SDET / QA Automation Engineer

Bangalore, India • amitkurmoli79@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

SUMMARY

SDET / QA Automation Engineer with 5+ years of experience delivering end-to-end test automation for web, mobile, API, and enterprise applications for global clients from Bangalore. Skilled in building scalable, CI/CD-integrated automation frameworks from scratch using Python and Java with Playwright, Selenium, Appium, REST Assured, and k6. Experienced in driving quality across the software lifecycle through test strategy, automation, performance testing, CI pipelines, and release quality gates.

TECHNICAL SKILLS

Test Automation (UI): Python, pytest, Playwright, Selenium WebDriver, Appium, Java; Page Object Model, fixture design, parallel execution, flaky-test handling, framework design from scratch

API Testing: REST and GraphQL; httpx, requests, REST Assured, Postman; contract testing (Schemathesis), schema validation, authentication flows, negative and error-handling scenarios

Performance & Observability: k6; load, stress, spike, and soak testing, SLO thresholds; Prometheus, Grafana, Tempo, Loki, OpenTelemetry, distributed tracing

CI / CD & Quality Gates: GitHub Actions, Jenkins, Docker, Docker Compose; pipeline design, smoke → nightly → release quality gates; AWS familiarity (EC2, S3, IAM)

Backend, Data & Reporting: FastAPI, SQL, SQLite, PostgreSQL, Pydantic; database validation in test suites; Allure, Extent Reports, HTML reporting; Git, GitHub, Jira, agile delivery

Cross-Platform Testing: iOS and Android device matrix, React Native context, cross-browser (Chrome, Firefox, Safari), Windows desktop application testing, accessibility (WCAG)

PROFESSIONAL EXPERIENCE

Quality Engineer — Pepper Square

Bangalore, India | 2022 – 2024

Quality automation for a digital product consultancy delivering web and mobile products to overseas clients.

Cross-Platform Fitness App — React Native app (iOS/Android) with a Node.js/NestJS API and a web CMS, for a US-based outdoor-fitness organization.

- Built and maintained Appium UI automation (Java, Page Object Model) for core mobile journeys — onboarding, authentication, workouts, challenge participation, nearby-location discovery via geolocation, and HealthKit / Google Fit sync — across Android and iOS devices.
- Automated REST API validation (REST Assured) for 20+ endpoints — status codes, schemas, authorization, and negative cases — plus Selenium coverage of the admin CMS workflows.
- Contributed reusable framework components (TestNG, Maven, POM, parallel execution, retry, Extent Reports) wired into Jenkins; as part of a two-QA team, helped grow a regression suite of ~180–220 automated tests (~90% of business-critical workflows) and cut full regression from ~2 days to under 4 hours.

Stack: Java · Appium · Selenium · REST Assured · TestNG · Maven · Jenkins · Docker · React Native · Node.js/NestJS · Jira

Restaurant Online-Ordering Web Platform — ordering and account web app for a US national restaurant brand (short engagement).

- Contributed UI test automation (Selenium, Java) across critical ordering flows — location search, menu, cart, and checkout — with mobile-web validation across iOS and Android viewports, feeding the team's Jenkins smoke and regression runs.

Stack: Java · Selenium · Cross-browser · Mobile-web · Jenkins

Web Accessibility Audit — WCAG 2.1 A/AA audit of a global pharmaceutical company's corporate website (~20 page templates).

- Ran the audit as the accessibility tester on a team-led engagement — screen-reader and keyboard testing (NVDA, JAWS, VoiceOver) alongside automated scans (axe-core, Lighthouse), executing ~30 manual test cases mapped to WCAG success criteria across browsers.
- Logged ~60 accessibility issues with severity, WCAG references, and reproduction steps, validated fixes with developers, and proposed integrating automated a11y checks into CI.

Stack: WCAG 2.1 A/AA · axe-core · Lighthouse · NVDA · JAWS · VoiceOver · Cross-browser · Jira

Member Technical Staff, Quality — Sharp

Bangalore, India | 2019 – 2022

QA across Sharp's document-solutions and business-IoT products — web portal, Windows desktop, and mobile.

COCORO OFFICE — cloud business-IoT portal for managing Sharp multifunction printers and office devices, used by enterprise IT administrators.

- Performed functional and exploratory testing across the admin portal — authentication, role-based access, device registration and configuration, dashboards, reporting, and notifications.
- Built and maintained Selenium WebDriver automation (Java, TestNG, Maven, POM) for business-critical admin workflows, with reusable synchronization and helper libraries and parallel regression execution.
- As part of a two-QA team, contributed to a suite of ~160–200 automated test cases (~85–90% of critical admin workflows) that reduced full regression from ~2 days to ~5–6 hours.

Stack: Java · Selenium WebDriver · TestNG · Maven · POM · Jenkins · Extent Reports · Jira

Sharpdesk & Sharpdesk Mobile — Windows document-management desktop application and companion iOS/Android apps — my first commercial QA project.

- Executed manual functional and regression testing across the Windows desktop app and mobile apps — printer discovery, scanning, document workflows, file sync, and error handling (~300–400 manual test cases across releases).
- Contributed Selenium automation (Java, Page Object Model) for stable workflows under senior-QA guidance, helping maintain ~60–80 automated regression scenarios, and logged and retested defects in Jira.

Stack: Java · Selenium WebDriver · TestNG · Maven · POM · Jenkins · Jira · Windows desktop · Android/iOS

KEY PROJECTS

Payment Reliability Lab — a payment-correctness test suite (FastAPI / PostgreSQL, pytest) that injects a dual-write failure — customer charged but the order left pending via a lost confirmation — using a deterministic fake payment gateway, then verifies the database ledger rather than HTTP responses alone and proves a reconciler recovers the order to paid with exactly one charge; covers idempotency and concurrent-duplicate handling.

github.com/Ak79p/payment-reliability-lab

Meridian Performance Audit — self-built performance & observability testbed (FastAPI/PostgreSQL): ran a five-scenario k6 campaign against defined SLOs and diagnosed a database connection-pool bottleneck from telemetry (Prometheus, Grafana, Tempo, Loki), lifting sustained throughput 63% (74 → 121 req/s) and eliminating checkout errors.

github.com/Ak79p/meridian-perf-audit

API Test Framework — quality-gated API automation: a layered test pyramid with a smoke → nightly → release CI strategy in GitHub Actions, contract testing via Schemathesis, k6 performance, and coverage gates.

github.com/Ak79p/api-test-framework

ASL-TRM — M.S. capstone: built the end-to-end data pipeline for a Transformer-based ASL gesture-recognition system (WLASL / ASL-Citizen datasets, MediaPipe feature extraction, training and evaluation ingestion).

github.com/Ak79p/asl_trm

EDUCATION

M.S. Information Science, University of Arizona

2024 – 2026

Machine Learning emphasis — data pipelines, data-centric systems, and applied research.

M.Tech Power Electronics

2016 – 2018

B.E. Electronics & Electrical Engineering

2012 – 2016
